

Is **Viagra** bad for you? What you should know?

About Viagra ED drug

- Viagra is an oral ED drug branded Viagra. However, both medicines work for controlling erectile dysfunction.
- Sildenafil Citrate is the key component that acts for boosting blood flow to the phallus and helps to gain an erection.
- This tablet is available in a standard dosage of 100mg.
- Online drugstore offers generic viagra 100mg tablets quickly.

How does Viagra help to control weak erections?

- The Viagra falls in a class of medicines called PDE5inhibitor that acts to inhibit the PDE5 enzyme.
- The Viagra acts to produce vasodilators and helps to supply higher blood flow.
- The enhanced vasodilator relaxes the muscles and dilates arteries.
- The higher blood augmentation results in an erection
